OpenCart Test Plan

1. Introduction

- Purpose: Ensure OpenCart's functionality, UI, security, performance, and compatibility meet quality standards before deployment.
- Scope: Manual testing of OpenCart features, including product management, cart, checkout, payments, and UI validation.
- Objective: Identify defects and ensure a stable, high-performing system.

2. Test Strategy

- Testing Type: Manual Testing (No Automation).
- Test Levels: Unit Testing, Integration Testing, System Testing, Regression Testing.
- Test Case Management: Using Excel/Google Sheets for test case documentation.
- Defect Tracking: Using Excel/Google Sheets instead of JIRA or other tools.

3. Test Environment

- OS: Windows, Linux.
- Browsers: Chrome, Firefox, Edge, Safari.
- Database: MySQL.
- Web Server: Apache/Nginx.

4. Test Scope

- Functional Testing: Verify OpenCart features like product management, cart, checkout, payments, and user registration.
- UI Testing: Check design consistency and responsiveness.
- Security Testing: Manually check login authentication, SQL injection, and XSS vulnerabilities.
- Performance Testing: Check page load times and system response.
- Compatibility Testing: Validate UI and functionality across different browsers and devices.

5. Entry & Exit Criteria

Entry Criteria:

- OpenCart deployed in the test environment.
- Functional requirements finalized.
- Test data prepared (sample users, products, orders).

Exit Criteria:

- All high-priority defects must be fixed.
- At least 95% test cases must pass successfully.

6. Test Execution & Defect Tracking (Using Excel/Google Sheets)

Test Execution:

- Test cases documented in Excel/Google Sheets.
- Execution status: Pass, Fail, Blocked, Not Executed.

Defect Logging:

- Maintain a Defect Tracker in Excel/Google Sheets with the following columns:
    - Defect ID
    - Summary
    - Steps to Reproduce
    - Severity (Critical, High, Medium, Low)
    - Status (Open, In Progress, Fixed, Closed)
    - Tester Name
- Assign defect severity manually and track status via the sheet.

Retesting & Regression:

- Once a defect is fixed, testers will retest and update the Defect Tracker accordingly.

7. Risk & Mitigation Plan

Potential Risks:

- Requirement changes during testing.
- Testing environment downtime.
- Inconsistent test data.

Mitigation Strategies:

- Regular sync-ups with developers for changes.
- Backup test environments to avoid downtime.
- Maintain controlled test data for consistent testing.

8. Test Deliverables

- Test Plan Document (this document).
- Test Scenarios & Test Cases (Excel/Google Sheets).
- Defect Tracker (Excel/Google Sheets).
- Final Test Summary Report (Excel/Google Sheets).

9. Schedule & Resources

- Start Date: [Your Start Date].

- End Date: [Your End Date].
- Testers: Harshal Rajput.

10. Approval

- Test Plan Reviewed By: Harshal Rajput.
- Approved By: QA Manager / Project Lead.
